OCT 16 1959

I had an interesting & productive session  
with Chas Randt & the Kety committee.  
I think it certainly would help them +  
us to have an airing of the scientific side  
of man-in-space, but if not do this  
one should ask him to sit in. There  
certainly are some valid objectives and  
I think SSB can help to sort this out.

The Kety committee also seems to have  
some pretty sound views on the role of  
ecology & should be encouraged in  
pushing them.
